近两个月工作内容

部门: Zen事业部

姓名: 朱广明

1. 赠送功能扩展和界面迭代

之前赠送仅支持SSR服装,现支持SR和单个衣服组件;是否支持赠送衣服外的物品还有待研究

```
Quniqueclass PresentType(object):"""赠送类型"""SSR_CLOTH = 1 # ssr衣服 (赠送背景: 视频)SR_CLOTH = 2 # sr衣服 (赠送背景: 2rtt + 图片)SINGLE_CLOTHE_COMPONENT = 3 # 单个衣服组件 (赠送背景: 1好友性别rtt + 图片)
```

新增赠送类型,便于扩展、结构清晰

支持SR服装

支持单个衣服组件

2. 月中banner

编写SR服装的通用代码SRClothCommonPanel,极大简化工作量应用:森之境、日月流影、草药学者、气翼鸟礼帽

```
class ClothSunAndMoonPanel(SRClothCommonPanel):
    def show_model(self):
        from comm import const
        from comm.DynamicData import DATA_shop_item
        import ui.present.PresentUtils as PresentUtils
        boy_item_id = DATA_shop_item.data.get(self.boy_shop_item_id, {}).get('commodity_id')
        girl_item_id = DATA_shop_item.data.get(self.girl_shop_item_id, {}).get('commodity_id')
        if hasattr(self, "node_boy"):
            boy_model = PresentUtils.get_sex_model_rtt(self.activity_id, boy_item_id, const.RoleSex.BOY, cc.Size(300, 600))
           self.add_rtt(self.node_boy, boy_model)
            boy_model.set_position(38, -80)
        if hasattr(self, "node_girl"):
            girl_model = PresentUtils.get_sex_model_rtt(self.activity_id, girl_item_id, const.RoleSex.GIRL,
                                                        cc.Size(300, 600))
            self.add_rtt(self.node_girl, girl_model)
            girl_model.set_position(55, -60)
```

日月流影代码量,只涉及到RTT位置调整

2. 月中banner

森之境

草药学者

日月流影

气翼鸟礼帽

3. 寻找嗅嗅活动和海外寻找嗅嗅复刻

- 1.寻找嗅嗅banner
- 2.海格小屋对话sl节点编写
- 3.合照进回忆相册

寻找嗅嗅

```

              Globals.logger.info("send_cn<<<<<<")
              send_personal_position_cn()
          else:
              Globals.logger.info("send_oversea<<<<<<")
              send_personal_position_overseas()
                                                                                                                                      地区频道
     def send_personal_position_cn():
          Globals.ui_mgr.open_ui('SecondSurePanel', {
              'title': helpers.get_lang_text('get_locate_authorization_tips', const.Table.UI_TEXT),
              'confirm_cb': LBSUtils.send_personal_position_and_region,
              'zorder': 9999,
              'ui_layer': const.UILayer.UI_SCREENSHOT,
         })
     |def send_personal_position_overseas():
          config = {
              # 'match_type': 1,
              'is_near': True,
          Globals.ui_mgr.open_ui('OverseaLBSOpenPanel', config)
```

5. 登录概率出现在休息室

```
def get_ratio_list(self, xlsx_ratio_str):
    weights = [int(value.get(xlsx_ratio_str, 0)) for value in self.values]
    if len(weights) == 0:
        return []
    LoginEnterScene.calculate_cumulative_weights(weights)
    total_value = 1.0 * weights[-1]
    ratio_list = [weight / total_value for weight in weights]
    ratio_list.insert(0, 0)
    Globals.logger.info("<<<login---ratio_list:%s", ratio_list)
    return ratio_list
@staticmethod
def calculate_cumulative_weights(weights):
    for i, weight in enumerate(weights):
        if i == 0:
            continue
        weights[i] = weights[i - 1] + weights[i]
def get_id_list(self):
    id_list = [int(value.get("id", 0)) for value in self.values]
    Globals.logger.info("<<<login---id_list:%s", id_list)
    return id_list
```

表里读取登录场景和概率

其他工作

- 6. 一些其它banner
- 1) 春季舞会
- 2) 社团活动迎新
- 3) 魔咒稀有度调整
- 7. 社区上传视频SDK接入
- 8. 附近频道和社团排行相关优化
- 9. 一些体验优化和bug修复

THANK YOU 網易 NETEASE
